

Hello Transpower Hiring Team,

I hope you're doing well. My name is Jesse McIntosh, and I'm excited to apply for the Senior Software Engineer position on your Application Services team. I bring extensive experience in Java, Spring Boot, microservices, and DevOps—and I'm eager to contribute to Transpower's mission of delivering reliable electricity while driving a net-zero carbon future.

My background includes:

**Complex Domain Solutions:** At Wells Fargo, I focused on high-availability data pipelines and microservices, reducing runtimes by up to 80% while ensuring scalability.

**Iterative Development:** Previously, as Owner of Mom and Pop Studios, I collaborated with multiple small business owners to design and refine websites and applications based on continuous feedback.

**DevOps & Automation:** I've implemented CI/CD pipelines, containerization, and rigorous testing to enable rapid, secure releases.

**Collaboration & Stakeholder Engagement:** I enjoy translating business needs into resilient software, whether working with analysts, product managers, or technical peers.

I'm inspired by your award-winning IT shop and the opportunity to shape the modernized electricity market system. Thank you for your consideration, and I look forward to discussing how my skills can support Transpower's important mission.

Ngā mihi nui,

Jesse McIntosh
